Lynn

Thank you for your call. Althea Foster (cced on this email) is working on this response and will work on your question regarding the critical habitat for the fish species in the San Juan River near Farmington we discussed.

So far, Region 6 has deployed and EPA OSC and contractors to Farmington to collect water samples from the waterways potentially affected by the Gold King Mine incident. The samples will be analyzed for TAL Metals, Mercury, and pH. Specific sample locations are being identified based on drinking water intakes and high risk locations.

Thank you
